1. Begin with a square, colored side up. Fold and unfold along the diagonals. Turn over the paper.

2. Fold in edges CD and AD to meet along the center line; unfold and turn the paper back over.

3. Fold corner B down along a crease that runs from point E to point F.

4. Fold edge AD to edge EB and unfold. Fold edge DC to edge BF and unfold.

5. Use the creases you just made to fold a rabbit ear from point D.

6. Mountain-fold the right half of the model behind.

7. Reverse-fold corner G. Rotate the model 1/8 turn clockwise.

8. Fold and unfold. Repeat behind.

11. Reverse-fold the two edges back to the left.

12. Reverse-fold the edge. Repeat behind.

13. Reverse-fold corner H.

14. Pull corner B (one of the original corners of the square) as far out as possible.

15. Reverse-fold corner B to the left along the center line.

16. Reverse-fold corner B upward to line up with the other points.

17. Reverse-fold both edges.

18. This is a close-up of the top of the model; there should be five points at the top. Reverse-fold a little less than half of the near point to the left.

19. Wrap all layers from the inside to the outside. This is much easier if you open out the point, wrap the layers, and then re-fold.

20. Fold the tip of the colored point inside and underneath.

21. Repeat steps 18–20 on the other four flaps.

22. Press all the layers together and carefully valley-fold through them all. The colored points at the top swing to the right.

23. Crimp two points downward, folding them together as one. It will be easier if you partially unfold the previous step to accomplish this.

24. Reverse-fold out two more points, folding them together as one.

25. Crimp one of the two points downward on each side.

26. Open up each of the leaves and twist them around to a natural position.

27. Mountain-fold a portion of the bottom behind to make a base.
